

r-PET Smoothie Cups & Lids

Recycled. Responsible. Ready to Perform.

Our range of high-quality TruGreen r-PET cold cups is produced using independently certified post-consumer recycled material, providing a responsible alternative to virgin plastic and supporting the shift towards a more circular economy. Our range offers a choice of 30%, 70% and 100% recycled PET (r-PET) options, giving businesses the flexibility to choose the recycled content that best suits their needs. By incorporating post-consumer recycled material, the range helps keep valuable resources in use for longer while providing a more sustainable choice for businesses and consumers.

Strong, crystal-clear and designed to showcase beverages at their best, the range is ideal for serving a wide variety of drinks including smoothies, juices, bubble tea, iced coffee, cocktails, beers, ciders and lagers.

A key benefit is the one-size-fits-all lid (apart from 1/2 pint to brim), helping to simplify stockholding, while the fully rolled rim provides additional strength and a secure, reliable seal.

For licensed venues, we also offer 30% & 100% r-PET CE-marked pint and 1/2 pint cups to brim, specifically designed for serving beers, ciders and lagers. These cups combine the performance and clarity required in busy hospitality environments with the benefits of using recycled material, helping businesses meet the required standards while making a more responsible material choice.

The high level of clarity and strength gives drinks a premium presentation, while the robust design makes the cups suitable for a wide range of hospitality, leisure, festival and event environments.

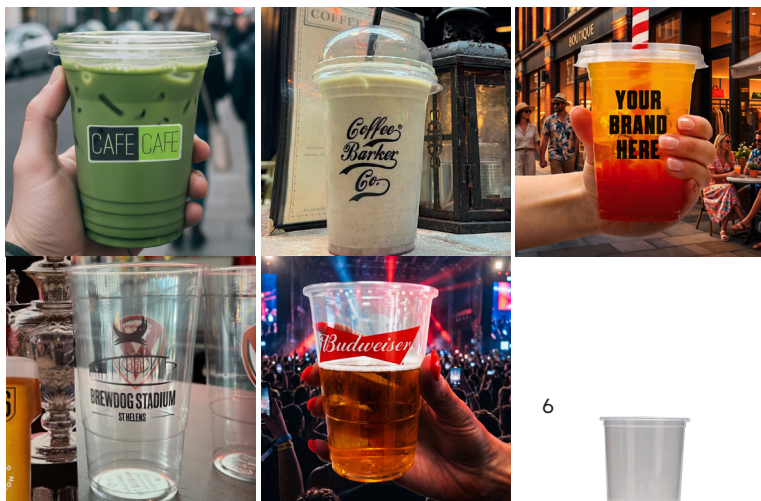

r-PET CE marked Cold Cups

Make Your Cups Work Harder for Your Brand

The entire TruGreen r-PET range can be custom printed in up to 6 colours, providing an effective way to showcase your brand, promote an event, communicate a campaign or create a completely bespoke drinking experience.

From 70% r-PET smoothie cups to CE-marked 30% & 100% r-PET pint and ½ pint cups, the TruGreen range delivers - a combination of recycled content, performance, premium presentation and brand visibility.
